

# **MURRAY GREY SIRE SUMMARY**

**WINTER 2017**

**INTRODUCTION** – The American Murray Grey Association Winter 2017 Sire Summary has been compiled from the most recent genetic evaluation of the Murray Grey breed around the world. To be included in the AMGA list, a sire must have at least 20% Accuracy in either Weaning Wt or Yearling Weight EPDs, 3 or more progeny under evaluation in 2 of the last 3 years. For inclusion in the published Carcass Traits Evaluation, a sire needed to have data reported in 3 or more categories. Inclusion or exclusion from this list is not a statement on the breeding value of a sire. Positive EPD and Accuracies are reported without the “+” sign. Top 10% of values in each category are shaded blue.

The EPDs for other Murray Greys can be found on the AMGA Pedigree and EPD web site.

**Disclaimer:** The American Murray Grey Association assumes no liability for typographical errors that may have resulted in formatting the Sire Summary for publication.
